

## Impact of CIPM MRA

Psiber Data, part of the Softing group of companies, is a fast growing technology company focussed on delivering test and measurement solutions to the communications infrastructure market. Instrumentation for structured cabling installations and Ethernet network testing are some of the key markets that Psiber Data addresses.

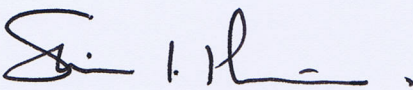

Since 2012, Psiber Data has collaborated with the National Metrology Centre (NMC), A\*STAR of Singapore to ensure traceable accuracy measurements and thus global recognition and applicability for its handheld network analysers. This work has benefited from NMC's Calibration and Measurement Capabilities (CMCs) recognized by the International Committee for Weights and Measures (CIPM) Mutual Recognition Arrangement (MRA). The collaboration helped Psiber to achieve independent certification by ETL that our products exceed the requirements of international TIA and ISO standards. This includes Psiber being the first company in the world to have an instrument capable of meeting the requirements of the draft standards at 2 GHz as required for 40 Gbps Ethernet copper cabling systems.
